13 slide(s) shown, with average of 42 responses per slide.

The following report presents data in quartiles, e.g., values that divide a list of numbers into quarters.

- 25<sup>th</sup> Percentile/first quartile = 25% of the data falls below this percentile.
- 50<sup>th</sup> Percentile/Median = The median represents the middle number where 50% of answers are lower and 50% are higher. For example, if you have a series of numbers like: 1,5,10,15,30, the median is 10 (the average would be 12.2 and is typically higher than the median which is not skewed by a single high or low response).
- 75<sup>th</sup> Percentile/third quartile = 75% of the data falls below this percentile.
